Workshop 2 (with answers)

CW1 Release; IDEs + Java 9/10/11 additions; Maintaining the ZooApp

Peer-Olaf Siebers

Week 2 Organisation

- Lecture 2:
 - Going through more advanced Java topics
 - Java Collections framework
 - Implementation of object oriented principles
 - Lab 2:
 - Working further on the ZooApp example
 - Looking at packages
 - Workshop 2:
 - CW1 Release
 - IDEs + Java 9/10/11 additions
 - Maintaining the ZooApp (basic maintenance)
- Assignment Project Exam Help

what's new in Java 9/10/11

Add WeChat powcoder

What's new in Java 9/10/11

- Java 9

- Modules
- jShell (read-evaluate-print loop tool)

Assignment Project Exam Help

<https://powcoder.com>

- Java 10

- Local-Variable Type Inference
- Enhancements for garbage collection and compilation

Add WeChat powcoder

- Java 11

- Removal of JavaFX, which is now available as a standalone technology

Notes from Demonstration

REPL Commands - Notepad

File Edit Format View Help

```
To run jshell you need to be in the Java directory
Use -v for verbose feedback

Replace $x with the correct link (e.g. $1 in the first place)

1+1
$x*2

ArrayList<String> x=new ArrayList<>();
x.add("B")
x.add("A")
Collections.sort(x)
x

new ArrayList<>();
$7.add("A")
$7

void HelloREPL(){
System.out.println("Hello");
}
HelloREPL()

var x=new ArrayList()
x.add("D")
x.add("C")
Collections.sort(x)
x

var x=new ArrayList<String>()
x.add("E")
x.add("F")
Collections.sort(x)
x

var x=List.of(1,2,3)
x

Set.of(4,5,6)
$16

var z=Map.of(1,"A",2,"B")
```

Modules - Notepad

File Edit Format View Help

File > Import > General > Existing Projects into workspace > Select archive file > TestModule.zip
Note: This only works if TestApp and TestTools do not already exist in the workspace!

Right click TestApp > BuildPath > Configure BuildPath > Projects > Modulepath > Add > TestTools

Right click TestApp > Configure > Create module-info.java > use testApp as module name
Delete "exports com.siebers.App;" as we want to keep this package private
Edit "requires testTools;" (module name is testTools)

Right click TestTools > Configure > Create module-info.java > use testTools as module name
Delete "exports com.siebers.DB;" as we want to keep this package private

Rule: "export" packages; "require" modules;

- Use IntelliJ

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Basic Maintenance

- Dividing all classes into packages
 - Why is this useful?
- Making all animal subclasses abstract
 - They should not be instantiated as they are still high level
- Removing redundant code
 - "buildNewEnclosure()" is not required any more
 - Remove some setters (to gain control)
- Commenting code and producing Javadocs

Assignment Project Exam Help

Basic Maintenance

- Packages are used in Java in order to prevent naming conflicts, to control access, to make searching/locating and usage of classes, interfaces, enumerations and annotations easier, etc.

Remark: This and the following screenshots are based on an earlier version of ZooApp

- Javadocs

```
/**
 * xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 * <p>
 * xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 * @param variable      Description.
 * @return              Description.
 */
```

@author John Smith	Class, Interface, Enum
@version version	Class, Interface, Enum
@since since-text	Class, Interface, Enum, Field, Method
@see reference	Class, Interface, Enum, Field, Method
@param name description	Method
@return description	Method
@deprecated description	Class, Interface, Enum, Field, Method

Basic Maintenance

```
1 package zooPackage.zoo;
2 import java.util.ArrayList;
3 import zooPackage.animals.Animal;
4
5 /**
6  * Objects of this class represents zoo enclosures.
7  *
8  * @author Peer-Olaf Schneider
9  * @version 2.3
10 * @since 1.0
11 */
12
13 public class Enclosure {
14     private ArrayList<Animal> animals;
15
16     public Enclosure() {
17         animals=new ArrayList<Animal>();
18     }
19     /**
20      * This method adds animals to the "animals" list.
21      *
22      * @param animal An animal that lives in any of the Zoos.
23      */
24     public void addAnimal(Animal animal){
25         animals.add(animal);
26     }
27 }
```

Basic Maintenance

Basic Maintenance

And finally ...

- Two things we have not dealt with which are vital for SWM
 - Version control (e.g. GIT Repository)
 - Unit testing
